## Application Information

### Notes

1. Shield grounds must be terminated on the controller side of the cable.
2. When an analog device is powered via an external power source, it may be necessary to tie the ground of this power source to the module's analog common (ACOM) to limit common mode voltages.
3. Insertion and/or removal of I/O modules should be done with all power removed. Failure to do so may lead to damaged electronics and/or incorrect I/O states.
4. Incorrect I/O connections may lead to damaged electronics and/or incorrect I/O states.
5. For register and programming information, refer to the appropriate controller Applications Guide.
